

PLANVIEW OPENSUITE FOR RALLY SOFTWARE

Planview Enterprise® lets program, project, product, and resource managers map their plans and roadmaps to corporate goals, and drive strategy through to execution across all projects.

Rally Software's Agile Application Lifecycle Management allows software developers to view Agile project status, progress, and quality.

Planview OpenSuite for Rally Software connects market-leading PPM and Agile ALM solutions helping customers accelerate the pace of innovation and increase capacity to deliver products to market. This unique integration provides visibility into the financial costs of Agile projects and enables better collaboration between software development and program managers.

Planview Enterprise Integration with Rally Software

Planview OpenSuite for Rally Software delivers a consolidated portfolio view in Planview Enterprise to allow organizations to better understand and manage all types of projects. Product and program managers can more accurately plan and monitor project execution in Planview Enterprise, thereby aligning development work with program priorities. Through the status and financial information exchanged, managers can more accurately assess the total cost of software development projects.

A program or project manager inputs project specifics into Planview Enterprise and the data is exported to Rally. Using Rally, developers can then define, assign, and implement the required user stories and tasks needed to deliver the requested business value.

Progress made on completing the work in Rally is automatically maintained in Planview Enterprise so that the program or project manager can easily see the status. Time entered by developers in Rally is automatically sent to Planview Enterprise where it drives reports that show planned versus actual cost.

Planview Open Suite for Rally Software provides visibility into total financial cost of development projects and further extends the support for Agile development practices in Planview Enterprise. Both project managers and those executing development projects can use the software that works best for their roles, while communicating to ensure maximum productivity and efficient delivery of products and services.
